Abstract

The longest available instrumental record of temperature in the world is now available at the BADC. The seasonal data starts in 1659.

The mean, minimum and maximum datasets are updated monthly, with data for a month usually available the 3rd of the next month. A provisional CET value for the current month is calculated on a daily basis. Th mean monthly data series begins in 1659. Mean maximum and minimum daily and monthly data are also available, beginning in 1878.

These historical temperature series are representative of the Midlands region in England, UK (a roughly tri angular area of the United Kingdom enclosed by Bristol, Lancashire and London).

The following stations are used by the Met Office to compile the CET data: Rothamsted, Malvern, Squires Gate and Ringway.

Details

Previous Info:	No news update for this record
Previously used record identifiers:	No related previous identifiers.

Access rules:	Public data: access to these data is available to both registered and non-registered users. Use of these data is covered by the following licence(s): http://www.nationalarchives.gov.uk/doc/open-government-licence/version/3/ When using these data you must cite them correctly using the citation given on the CEDA Data Catalogue record.
Data lineage:	HadCET was acquired in 1998 by the BADC from the Met Office Hadley Centre and was routinely updated until August 2022.
Data Quality:	Data is quality-controlled by the Met Office.
File Format:	ASCII
